

Exercise 9.4: Use Labels to Manage Resources

1. Try to delete all Pods with the `system=secondary` label, in all namespaces.

```
student@cp:~$ kubectl delete pods -l system=secondary \
--all-namespaces
```

```
pod "nginx-one-74dd9d578d-fcpmv" deleted
pod "nginx-one-74dd9d578d-sts5l" deleted
```

2. View the Pods again. New versions of the Pods should be running as the controller responsible for them continues.

```
student@cp:~$ kubectl -n accounting get pods
```

| NAME | READY | STATUS | RESTARTS | AGE |
|----------------------------|-------|---------|----------|-----|
| nginx-one-74dd9d578d-ddt5r | 1/1 | Running | 0 | 1m |
| nginx-one-74dd9d578d-hfzml | 1/1 | Running | 0 | 1m |

3. We also gave a label to the deployment. View the deployment in the accounting namespace.

```
student@cp:~$ kubectl -n accounting get deploy --show-labels
```

| NAME | READY | UP-TO-DATE | AVAILABLE | AGE | LABELS |
|-----------|-------|------------|-----------|-----|------------------|
| nginx-one | 2/2 | 2 | 2 | 10m | system=secondary |

4. Delete the deployment using its label.

```
student@cp:~$ kubectl -n accounting delete deploy -l system=secondary
```

```
deployment.apps "nginx-one" deleted
```

5. Remove the label from the secondary node. Note that the syntax is a minus sign directly after the key you want to remove, or `system` in this case.

```
student@cp:~$ kubectl label node worker system-
```

```
node/worker unlabeled
```
